

Aluminum / Copper / Steel derivatives

AWB 870480400096 **Part number** NV-25 (Netsuken) **Description** Sushi Rice Warmer

1) Does the product contain Aluminum? No _____ / Yes x (go to question 4)

2) Does the product contain Copper ? No _____ / Yes X (go to question 5)

3) Does the product contain Steel ? No ____ / Yes X (go to question 6)

**** If none of the above what is the composition _____**

Aluminum

4) Full weight of the product 8.5 kg Aluminum derivative weight 0.8 kg

Value of the product USD 798.00 Value of the Aluminum derivative USD 80.00

Country of Smelt Japan Secondary Country of Smelt Japan Country of Cast Japan

*Primary Smelt- *Country where the product was most recently cast applies to the country where the aluminum (with or without alloying elements) was last liquified by heat and cast into a solid state. The final solid state can take the form of either a semi-finished product (slab, billets or ingots) or a finished aluminum product.*

Secondary Smelt - The country where the largest volume of primary aluminum used in the manufacture of the product was smelted applies to the country where the largest volume of new aluminum metal is produced from alumina (or aluminum oxide) by the electrolytic Hall-Héroult process. Secondary aluminum is defined as aluminum metal that is produced from recycled aluminum scrap through a re-melting process.

Cast- *The country where the second largest volume of primary aluminum used in the manufacture of the product was smelted applies to the country where the second largest volume of new aluminum metal is produced from alumina (or aluminum oxide) by the electrolytic Hall-Héroult process. Secondary aluminum is defined as aluminum metal that is produced from recycled aluminum scrap through a re-melting process.

**** If the Country of smelt/cast information is Russia or Unknown, an additional duty will be applied at the current highest rate.**

Copper

5) Full weight of the product 8.5 kg Copper derivative weight 0.05 kg

Value of the product USD 798.00 Value of the Copper derivative USD 5.00

**** If the amount of copper is not known or not provided, an additional duty will be applied at the current highest rate.**

Steel

6) Full weight of the product 8.5 kg Steel derivative weight 4.0 kg

Value of the product USD 798.00 Value of the Steel derivative USD 400.00

Steel Melt/Pour country Japan

The Steel new rule Melt/Pour defines "melted country and poured" √ as "the original location where the raw steel is: (A) First produced in a steel-making furnace in a liquid state; and then (B) Poured into its first solid shape... The first solid state can take the form of either a semi-finished product (slab, billets or ingots) or a finished steel mill product.

**** If the amount of Steel is not known or not provided, an additional duty will be applied at the current highest rate.**

Manufacture Name Netsuken Co., Ltd.

Address 3-19-9 Motoasakusa, Taito-ku, Tokyo 111-0041, Japan

Completed by TOYOTA SUMI

Title Seller (eBay International Shipper)
